ABSTRACT OF THE INVENTION

1

2   A method for a server to provide professional training information and compliance

3   knowledge information to networked computers. The method obtains login data from a user at a

4   computer. The user is provided compliance knowledge based on the login data. The user is also

5   provided personalized professional training associated with the compliance knowledge and based

6   on the login data. Compliance use data, training performance data and training progress data

7   associated with login data is generated. The generated data is used for the generation of

8   documents. The system provides compliance management to a user having administrative

9   privileges. The system enables communication between users of the system.
